THE PRODUCT

GreatSchools has a database with school quality info and a traditional search experience.

-  By school's name
-  By location
-  By attribute
 -  School district
 -  Programs (e.g., STEM, immersion)
 -  Teaching style (e.g., Montessori)

Find a great school.

School name, level, or type

Burlingame, CA

Elementary

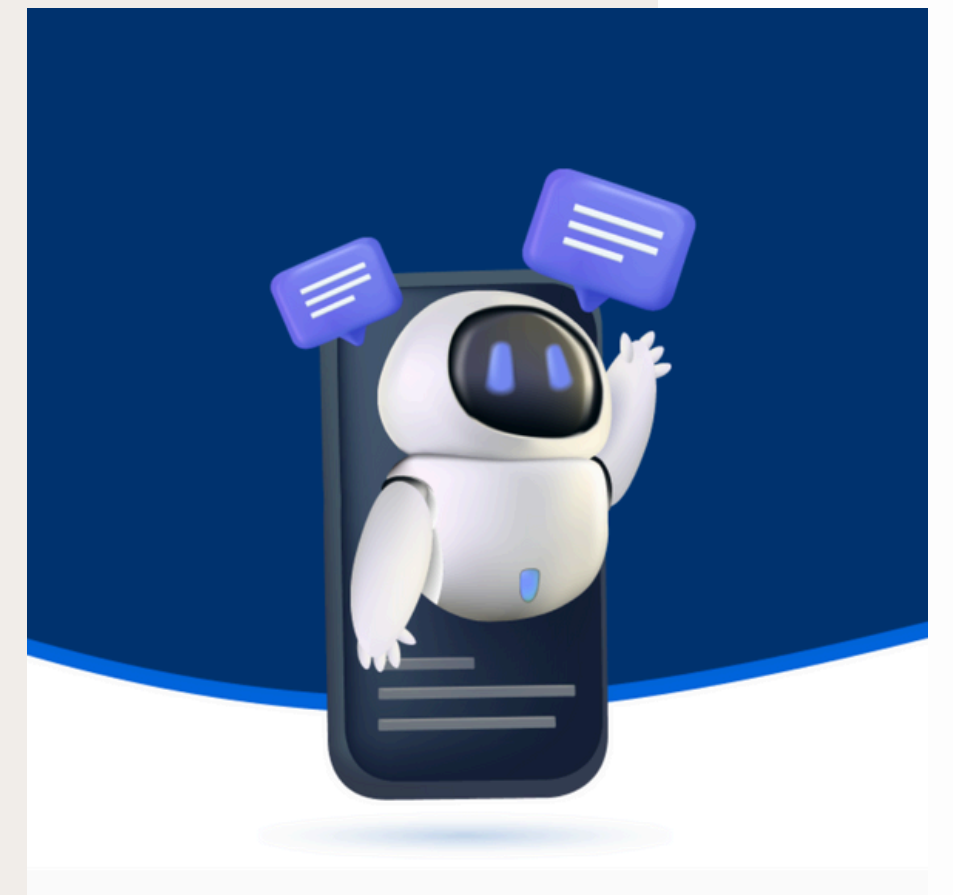

Middle

High

K-12

PAIN POINTS

 Problems	• Parents struggle to find schools with niche programs and opportunities. • Difficult to prioritize & weigh tradeoffs.
 Partial solution	• GreatSchools has filters for common school specialities. • GreatSchools has resources like blogs to help parents assess options.
 Better solution	• Build an AI Chatbot that offers pros and cons based on real context. • Speeds up relevant discovery without sacrificing depth.

RESEARCH PLAN

- Method
 - Moderated prototype testing
- Participants
 - Two rounds with n=5 participants each
 - Screened to identify parents of K-12 students in the US who had recently selected a new school

FINDING	RECOMMENDATIONS	IMPACT
• Clear understand of distinct jobs-to-be-done and use cases for the chatbot.	• Adjust roadmap priorities and focus engineer scope on a specific use case.	• Estimated \$200k in savings from engineering budget.
Opening question was a turn off: <i>“What do you - or your student - value in a school?”</i>: • Too personal, feels invasive • Don’t know where to start • Difficult to be concise	• Build trust by asking about location. • Use multiple choice as a warm-up when broaching the subject of priorities.	• Task completion increased by 30 percentage points.
• Most users expected the first question to be about their location.
